ROLLER COLLECTION

LEED

Leadership in Energy and Environmental Design

The U.S. Green Building Council (**USGBC**) is the most important American association of industries in the building sector aimed at promoting methods of design and construction that lead to a significant reduction or elimination of the negative impact that buildings have on the environment.

To enable concrete quantification and correct monitoring of the degree of sustainability achieved by a building project, in 1999 the USGBC established a certification procedure called **LEED (Leadership in Energy and Environmental Design)**.

The LEED credits certify the eco-sustainable requisites of projects which can "function" in a sustainable and autonomous way in terms of energy and which have a **low-environmental impact** throughout their life-cycle.

The LEED system is based on the award of points for every single eco-sustainable-requisite of a project, divided into several major areas:

- sustainable construction sites
- protection of water resources
- energy efficiency and use of renewable sources
- storage, composition, and origin of construction materials and raw materials
- indoor environmental quality
- innovation in design.

Totalling up all the awarded points, the building obtains a certain eco-sustainable level. **Terratinta Group Srl SB SU**, with **FLUTED & JOINT** project, has achieved 6 LEED points.

MR Credit 5.1 Regional Materials 10% (1 LEED point)

MR Credit 5.2 Regional Materials 20% (1 LEED point)

SS Credit 7.1 Heat Island Effect - Nonroof (1 LEED point)

SS Credit 7.2 Heat Island Effect - Roof (1 LEED point)

EA Credit 1 Optimize Energy Performance (1 LEED point)

EQ Credit 4.2 Low Emitting Materials - Flooring Systems (1 LEED point)
